基于多模式交互的车内情感体验设计

Design of In-Vehicle Emotional Experience
Based on Multimodal Interaction

生活中我们常常处于各种情绪状态之中，比如快乐、悲伤、愤怒、焦虑、恐惧等等。而在自动驾驶汽车领域，情感又会对驾驶产生怎样的影响呢？本项目通过HMI设计调动车内的情绪，调整对驾驶带来不良影响的情绪状态。

In Life, We Are Often In Various Emotional States, Such As Happiness, Sadness, Anger, Anxiety, Fear, And So On. In The Field Of Autonomous Vehicle, What Impact Will Emotion Have On Driving? This Project Uses HMI Design To Mobilize Emotions In The Car And Adjust The Emotional State That Has A Negative Impact On Driving.

车内情感体验的概念

Instinctive layer

Starting from the interior properties of the vehicle, provide users with perceptual stimuli to induce emotional reactions.

Behavioral layer

Emphasizing the efficiency and fun that users can have during the driving process, which made many innovations in human-computer interaction.

Reflection layer

Emphasize the additional emotions and deeper spiritual or cultural connections that the product's car brings to users.

重要性

Social development call for emotional demands

People needs more emotional interaction instead of purely material needs.

People prefer to interact with people

Humanization is a very important research in the subject of human-computer interaction.

Everything is to impress you

The real value of a product is to satisfy people's emotional needs, and love arises when the special qualities of an item become part of our daily lives.

现有人机关系

The existing interaction mode is that the vehicle passively receives human instructions
