

专家访谈

Wang Weihao
Senior Designer Of Intelligent
Hardware Products

“HMI is not just an interaction between the interface and people. Should provide users with a more cognitively habitual way of interacting.”

Current products are pursuing

About emotional experience

- Predict**
Most of the interactive experiences now do not leave enough space for people to feel the pre-judgment and pre-experience, they are relatively direct.
- Smooth**
It is very important to have a smooth connection in the process of hardware and human interaction.

Perspective

Fang Zihao
Interaction Designer Of Li Auto

“I hope that if you do emotional experience, try your best to use the service of the car instead of just doing the car. Although the car can carry a lot, it is not comprehensive.”

Ways to pay attention to user emotions at present stage

Ways to pay attention to user emotions at present stage

Lots of in-car sensors

Anthropomorphic as possible

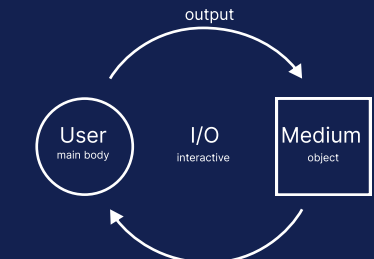

Lighting is also a point

Mobilize user emotions through HMI

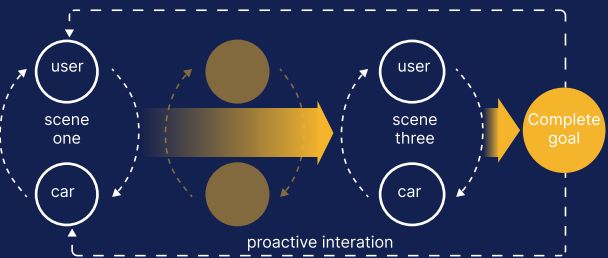

Detailed prosona

Anticipate user scenarios

About active interaction

The subject inputs needs into the object, and the object outputs feedback to the subject. This is what we often call **passive interaction**.

Active interaction makes predictions based on the user's **possible future actions**, and reaches the user's possible target scenario in advance.

洞悉

Cars endure as enduring possessions, with the aspiration that they can adapt to the **evolving needs** of individuals and provide **enhanced companionship** to their users.

The drivers hope that a sense of **achievement** can be gained in the process and results of **mutual adaptation**.

Personalization entails the adjustment to **individual needs**, enabling users to sustain an optimal experience over time.

To maintain positive emotions and a favorable experience, users necessitate **prompt feedback** that is timely in nature.

Meeting the diverse needs of individual drivers can be challenging due to their **unique** driving habits, behaviors, and motivations, making it difficult to rely on a **generic approach**.

机遇

Cognition

Establishing emotional bonds

Adapt to the driver's lifestyle

Automatic adaptation

Form a deeper emotional bond

Enable to perceive the growth of cars

Active learning

Initiative

Improve the plasticity of the car

Adapt to the needs of drivers

Enable users to proactively shape

Interaction

Receive positive feedback

Provide interaction with user needs

reciprocity

Mutual achievement

Let people and cars appreciate each other
