

人机尺寸分析 Human machine dimension analysis

高个子男性
99个百分点的中国人
身高：1920mm
体重：112.2kg

矮个子女性
1个百分点的中国人
身高：1464mm
体重：30.5kg

方向盘直径

房舍-12-14度 (305-356)

赛车-10-12度 (254-305)

卡车-12-16度 (305-406)

工业用车-13-18度 (330-457)

舒适角度

- 座椅角度-95-100度-全神贯注
- 膝部角度-110-120度伸展
- 踝关节角度-90-100度舒适
- 肘部角度-80-165度舒适
- 上臂角度-0-35度舒适

观影尺寸分析 Observation size analysis

汽车作为一个可密闭空间，具有预布置的声学环境，车内的温、湿度、气味等环境变量的控制效率比室内更高，高密度的图像和声音媒体设备也使得车内声光环境的控制更优于媒体相对稀疏的室内。将全车中注视频率最高的区域变成观影和娱乐的载体，可以在躺姿下获得极佳的观影体验。

As a sealable space, cars have a pre arranged acoustic environment, and the control efficiency of environmental variables such as temperature, humidity, and odor inside the car is higher than indoors. The high-density image and sound media equipment also make the control of the sound and light environment inside the car better than in rooms with relatively sparse media. Turning the area with the highest video rate in the entire car into a carrier for watching and entertainment can provide an excellent viewing experience while lying down.

垂直視野

垂直方向具备细节观察能力的静态视野为 22° ，单双眼一致。考虑观影时的眼球运动及影幕包围感，其舒适观看范围约为 $25^{\circ}\sim 30^{\circ}$

The static field of view with the ability to observe details in the vertical direction is 22° , consistent with both eyes. Taking into account the eye movement and screen surrounding sensation during viewing, the comfortable viewing range is approximately $25^\circ \sim 30^\circ$

水平視野

人眼静态具备分辨能力的视野范围为中央30°，双眼可到36°~40°，考虑观影时舒适的眼球运动以及影幕环绕的沉浸感，我们把最佳的观影水平视野设定在40°~60°。

The static resolution range of the human eye is 30 ° in the center, and the binocular range can reach 36 ° to 40 °. Considering the comfortable eye movement during viewing and the immersive feeling of the shadow screen, we set the optimal viewing horizontal field at 40 ° to 60 °.
